GAIN Report #AR1036

Argentina

Citrus

Annual

2001

Approved by:

David Mergen

U.S. Embassy

Prepared by:

Edna Accari

Report Highlights:

Total Argentine citrus production in 2001 is forecast to be slightly higher than the previous year, due to improved climatic conditions in some of the producing areas. Total exports are expected to decline somewhat due to the devaluation of the Euro with respect to the dollar. Argentina increased the tariff on fresh citrus imports to 25 percent on April 10, 2001.

Includes PSD changes: Yes
Includes Trade Matrix: No

EXECUTIVE SUMMARY:

Production of fresh citrus in 2001 is forecast at 2.63 million metric tons, up 1.9 percent from the 2.58 million tons produced in 2000. With the exception of grapefruits, production of all other citrus fruits is expected to increase slightly.

The opening of the US market for fresh citrus from the northwestern Argentine regions (NOA) has generated interest among producers, who have increased the number of plants registered for 2001 exports.

The existing exchange rate gap between Argentina and European countries, and high internal costs, have are expected to cause a decrease in fresh citrus fruit trade this season.

SECTION I: SITUATION AND OUTLOOK

Fresh Citrus Area Planted

During 2000, there were 145,293 hectares planted with citrus in Argentina.

A break down by product and provinces follows (hectares):

Provinces	Oranges	Tangerines	Grapefruit	Lemons	Total
BuenosAires (San Pedro, San Nicolas, Baradero)	7,250	640	310	560	8,760
Entre Rios	18,000	20,000	1,800	1,500	41,300
Corrientes (Monte Caseros, Bella Vista)	18,100	8,050	820	3,290	30,260
Misiones	2,800	3,200	450	2,000	8,450
Jujuy	3,810	1,510	880	1,632	7,838
Salta	4,500	770	7,850	1,850	14,970
Tucuman	3,120	590	505	29,500	33,715
TOTAL	57,580	34,760	12,615	40,338	145,293

Developments in Planted Area and Production Methods

Lemons:

Last year nearly 240,000 lemon buds were grafted in Tucuman, 40 percent of which was Limoneira 8-A variety, 20 percent, Frost libon; 20 percent, Genova Nucelar; 15 percent, different types of Eureka and 5 percent Santa Elena variety. There was a strong tendency toward plant density of 400 to 550 plants per hectare.

Oranges:

In northeastern (NEA) as well as in northwestern Argentina (NOA), orange varieties such as Navelinas, Newhall, Lane Late and Parent Washington, and Salkustianas and the Valencias of early maturing Delta, Midnight and of late maturing Valencia Seedless and Frost were planted. The grafts most used were Trifolio, and some Citranger troyer and Carrizo. The average density of plantations was 400 plants per hectare.

Grapefruit:

Salta is the main grapefruit producing Province. Practically 63 percent of the grapefruit planted is pink varieties Foster; Henningers and Rubi; 31 percent corresponds to red grapefruit varieties Henderson, Mutacion La Toma, Tio Red, Star Ruby and Flame and the remaining 6 percent to white grapefruit Marsh Seedless. Jujuy is known principally for red grapefruits. The grafts most used are Cleopatra, Citrange, Citrumero and Wolkameriana. Density of the plantations is 250 plants per hectare.

Tangerines:

In the NEA, where the highest volume of tangerines is planted, the principal varieties for export are Clementinas, Novas and Ellendale and Murcott for internal consumption. Trofilio foot is the most used, and to a lesser extent Citrange Roger and Carrizo. Planting density is about 450 trees per hectare.

Production - Fresh Lemon

Total lemon production for 2001 season (harvested year around with the bulk of the harvest in May and August) is forecast at 1.17 million metric tons, or 7,889 metric tons more than in year 2000. In Tucuman, the drought during winter and spring time adversely affected the first blossom, but later on climatic conditions improved. When the new plants planted blossom a slightly higher lemon production and of better quality is expected for 2001, compared to 2000. However, recent rains have delayed the harvest, thus resulting also in a delay in shipments.

Production - Oranges

Argentine orange production for 2001 (harvested April-December) is forecast at 830,000 metric tons, 5 percent higher than last year's, due to improved weather conditions in Entre Rios and Buenos Aires provinces. In Entre Rios Province, last spring was very rainy and windy, and even though an increase in production is expected, it is estimated that the quality of fruit could be below normal levels, due to some diseases. In Buenos Aires, the weather conditions during the growing period were good, therefore a higher production is expected in this province.

Production - Tangerines

Tangerine production for the 2001 season (harvested April - November), could reach 445,000 metric tons compared to 438,058 metric tons produced in year 2000. This slight increase is due to greater tangerine production in the provinces of Buenos Aires, Misiones and Jujuy, which could offset the reduced production in Salta Province. The production of tangerines in the other producing provinces is expected to be similar to last years.

Production - Grapefruit

Fresh grapefruit production in 2001 (harvested April - December) is forecast at 187,000 metric tons, slightly less than the 189,237 metric tons produced in 2000. This decrease was in Salta where there were frosts in June and July of 2000, which caused reduced production of grapefruit. Moreover, heavy rains after December caused sprouts, which resulted in more fruit but of a smaller size.

Fresh Citrus Exports

During 2000 approximately 287,906 metric tons of citrus fruits were exported from Argentina valued at US\$ 132.5 million. The export season for lemons is from May through October with the heaviest export flow in July-August. In CY 2000, 204,662 metric tons of fresh lemons were exported for a value of US\$ 94.0 million. Principal destinations were to the Netherlands, Russia, Italy and Spain. Oranges are exported from May through November, with the peak during August-September. In 2000, orange exports reached 41,084 metric tons valued at US\$ 15.0 million. Main export markets were the Netherlands, Russia, Spain and France. Tangerine shipment begins in May and ends in September, with the heaviest flow taking place in September. Tangerine exports during the same period totalled 24,564 metric tons valued at US\$ 15.6 million, with the Netherlands, the United Kingdom, Canada and the Philippines the principal import markets. During CY 2000, Argentina exported 17,596 metric tons of grapefruit for an export value of US\$ 7.8 million, to Belgium, the Netherlands, United Kingdom and France. The export market season for grapefruits is May through September with the heaviest export volume in June.

Total exports of fresh citrus fruit in 2001 are forecast to reach 275,000 metric tons; fresh lemons will maintain nearly the same export volumes, with the drop in the European markets offset by other destinations such as the United States and Eastern Europe. Other citrus fruit export volumes will be less than last year due to: a) the devaluation of the Euro with respect to the dollar, and b) internal production and export costs.

It is forecast that Russia will buy more lemons from Argentina this year, as it is less expensive to purchase in Argentina than buy from Spain and/or Italy. Hong-Kong is also forecast to be a good market for citrus from Argentina this year because of South Africa's low quality fruit, due to that country's weather reduced crops. This will also help Argentina to export more oranges to Europe.

In CY 2000 Argentina imported nearly 20,371 metric tons of citrus fruit for a total import value of US\$ 11.1 million.

Principal imports were oranges (12,110 metric tons from Spain, Uruguay and Israel) valued at US\$ 6.7 million. Grapefruit imports totalled 7,657 metric tons, valued at US\$ 4.1 million, mainly from Israel, Uruguay and Chile. Some 232 metric tons of lemon were imported from Spain and Uruguay, and tangerines imported from Spain, Uruguay and Israel reached 372 metric tons.

CY 2001 imports of fresh citrus are expected to be 5 percent less because Argentina increased the import taxes of fresh citrus (among other products) from 13 percent (previously) to 25 percent at present. (Resolutions No. 8/2001 and 27/2001 issued by the Ministry of Economy). See Policy Section.

Consumption of fresh citrus

Due to the expected increase in total citrus output, and some decrease in exports, fresh consumption of oranges and grapefruits are estimated to increase slightly.

Table 1. Apparent Per Capita Consumption of Fresh Citrus in CY 2000 and forecast for CY 2001 (kg. per capita).

Variety	2000	2001
Lemon	2.8	2.2
Tangerines	10.8	10.2
Orange	17.4	17.8
Grapefruit	2.6	2.7

Prices:

Export prices for fresh lemon for 2001 are quoted at US\$ 7.50-8.00 per box, FOB Buenos Aires for Russia; \$8.00 for Europe; \$10-12.00 for the United States; \$8.00 for Canada; and \$9.50-10 for Hong Kong. We are using an average FOB price of US\$ 8.00. In the case of oranges we are using an average of US\$ 6.00 (broken down as follows): for Europe US\$ 6.00 per box, FOB Buenos Aires; for Canada \$6.50; Russia \$6.00 and the United States \$8.00. The export price for tangerines is the same as for oranges, an average of US\$ 6.00 per box of 10 kilos, FOB Buenos Aires, as nearly 70-80 percent of this fruit goes to European countries, and US\$ 6.50 for Canada. Nearly all grapefruit exports go to Europe quoted at US\$ 6.50 - 7.00 FOB Buenos Aires. Monthly wholesale (weighted average) citrus prices in dollars per kilogram for 2000 and January-April 2001 follow in the table below:

Table 2. Fresh Citrus Fruit Wholesale Prices (US\$/Kg.)

Policy:

Argentina increased the tariffs on most high value consumer ready food products to 35 percent on April 10, 2001 as part of a new economic recovery plan. The tariffs on most fresh fruits were increased from 13 to 25 percent.

No. of nomenclature: (updated April 10, 2001)	Export
